Message from the Chairperson of the ESG Sustainability Committee

Dynamic's

Value

2022 was a year when the global market demand faltered dramatically. The Russian-Ukrainian war, geopolitics, international inflation, US dollar interest rate hikes, and a resurgence of Covid-19 affected the operation of the global supply chain and weakened consumer confidence and demand, sending almost all markets into a period of cooling off simultaneously. At the same time, extreme weather is accelerating at a higher frequency all over the world. Humans are not only suffering huge losses of life and property, but are also facing an irreversible tipping point. Such changes are testing the resilience of global supply chains and the foresight of companies in terms of sustainability. As a global citizen, Dynamic continues to pursue operational breakthroughs, and also views net-zero transformation as an opportunity for sustainable transformation and incorporates it into the core of its corporate governance. Moreover, it has taken proactive action to keep pace with international carbon reduction and build a strong low-carbon competitiveness.

Firstly, to promote sustainable development, advance ESG-related matters and ensure that ESG is incorporated into our daily operations and investment decisions, we have set up an "ESG Sustainability Committee" in February 2022, established a sustainability strategy and organizational structure, internalized ESG into our business strategy, defined key performance indicators (KPIs), and tracked those in our monthly business meetings. Furthermore, we also report to the Board of Directors and receive supervision at our quarterly Board meetings. The ESG performance of Dynamic in 2022 includes the following: The Huangshi Plant received the May 1 Labor Merit

Ming-Hung, Huang

Chairperson of the Board of Directors and ESG Sustainability Committee

Certificate and was designated a Water-Saving Enterprise and Advanced Enterprise for Employment And Entrepreneurship and Leading Enterprise for High-Quality Industrial Development in Hubei Province, Advanced Organization in Production Safety, Contract-Abiding and Trustworthy Enterprise etc. The Kunshan plant was also recognized as an enterprise with harmonious labor relations in Suzhou City and received the International Sustainable Water Management Certificate from the "Alliance for Water Stewardship (AWS)". The Group has also been recognized as one of the top 5% of listed companies for six consecutive years in the Corporate Governance Assessment conducted by the Financial Supervisory Commission.

Further, Dynamic has aligned its governance priorities and targets with the Global Climate Action Initiative, and it has included "Net Zero Carbon Reduction" as the core of its governance by setting forward-looking short-, medium- and long-term carbon reduction targets: In terms of reducing the intensity of energy consumption and GHG emissions, using 2020 as the baseline year, at least a 4% annual reduction will be achieved by 2025; at least a 50% annual reduction will be achieved by 2030; and carbon neutrality will be achieved by 2040. In terms of planning for solar power generation, the first phase of photovoltaic power generation at the Huangshi Plant started operation in June 2022, with an annual generation capacity of approximately 200 thousand kWh and an equivalent carbon dioxide emission reduction of approximately 105 tonnes; and in terms of renewable energy usage, the purchase of 10 million kWh of green power in 2022 represents 5.7% of the Huangshi Plant's electricity consumption, which represents an equivalent carbon dioxide emission reduction of approximately 7,154 tonnes.

Specific carbon reduction actions planned for 2023 include: quantification of indirect greenhouse gas emissions (Scope 3) under ISO 14064; Carbon Footprint of Product (CFP) inventory under ISO 14067; commitment to Science Based Targets initiative (SBTi); further planning for a three-year investment of about TWD 132 million in solar power expansion projects; and an estimated annual power generation of 6.5 million kWh, with an estimated annual power generation capacity of 6.5 million kWh and an equivalent carbon dioxide reduction of about 3,417 tonnes; purchasing 40 million kWh of green power; UL2799 zero waste to landfill certification; and inviting the supply chain to join in the carbon reduction efforts, etc. We aim to contribute our part in promoting sustainable development in a harmonious relationship with the global environment.

Dynamic believes that climate action should not be delayed, and that company growth and the ecological environment can coexist and co-prosper. As we move forward with our partners in the green and low-carbon supply chain, environmental protection, social co-prosperity, and corporate governance have been incarnated into our peers. Together, we are moving towards a brighter future of sustainable development!

Dynamic Business Model and Global Layout	Dynamic's Value	Sustainable Development Goals	Environment Aspect Performance Highlights	Society Aspect Performance Highlights	Governance Aspect Performance Highlights	of indicators of Sustainability Accounting Standards Board (SASB)	Appendix
--	--------------------	-------------------------------------	---	---	--	--	----------

Dynamic is committed to producing high-quality and high-tech PCBs to meet customer needs.

The PCB industry is highly related to the developmental trends of technology. The explosive growth in the demand for 3C products so far has also contributed to the flourishing developments of PCBs. The demand for 3C is slowing down now. Emerging technologies, however, such as the high-frequency and high-speed 5G that connects everything together, the ever more popular utilization of automotive electronics, and the speedy expansion of advanced driver assistance systems (ADAS) and electric vehicles, are offering new opportunities in the development of the PCB industry.

Revenue generated per employee in 2022 was TWD 3.72 million, an increase of 15% from the previous year. This was mainly due to the development of the product structure towards higher technology and the expansion of the production capacity of the Huangshi Plant through automation and intelligence, which led to positive operating performance. To meet the demands of these emerging technologies, Dynamic has not only continued to improve product quality, enhance manufacturing capabilities, and strengthen R&D technologies, but has also deepened automation and intelligent production. Dynamic's medium- and long-term development focuses on the application of electric vehicles, autonomous driving, servers, and networking products.

Global Operational Service Network

dynamic

The global operational service network of Dynamic covers Taiwan, China, US, Mexico, Germany, Czech Republic, Macedonia, Japan, Korea, and Singapore. There are plants, subsidiaries, or offices in each of these countries to provide real-time sales, product service, and technical support to customers around the world.

dynamic	Corresponding to the United Nations Sustainable Development Goals	Dynamic's Value	Sustainable Development Goals	Environment Aspect Performance Highlights	Society Aspect Performance Highlights	Governance Aspect Performance Highlights	Comparison Table of indicators of Sustainability Accounting Standards Board (SASB)	Appendix

SUSTAINABLE GCALS United Nations' 17 Sustainable Development Goals (SDGs)

1 NO POVERTY * * * *	2 ZERO HUNGER	3 GOOD HEALTH AND WELL-BEING		6 CLEAN WATER AND SANITATION						13 CLIMATE ACTION	14 LIFE BELOW WATER	15 LAND	16 PEACE, JUSTICE	17 PARTNERSHIPS FOR THE GOALS	
॑॑॑ <u></u> #₩		-₩•	Ţ	Ŷ	- <u>`</u> ,	íí	₹	A HA	CO				<u>Y</u>	&	

The United Nations have set 17 Sustainable Development Goals (SDGs). Dynamic can combine the requirements of 8 of those 17 goals according to its own core capabilities, and continue to make more active investment in operation and management in the short, medium, and long term to achieve people-oriented, sustainable and co-prosperity 's vision.

	Goal	Dynamic's Approach	Accomplishment
5 GENDER EQUALITY	Gender equality and empowerment of women	Dynamic does not differentiate salaries and benefits by gender.	 Men and women share the same transparent compensation table that determines their salary. The number of female managers in 2022 is 51, which is the same as in 2021, and the proportion has increased from 32% to 37%.
	Inclusive, safe, resilient, and sustainable cities and human housing	Automotive boards are the core product being developed by Dynamic, which answers to the vehicle-to-everything (V2X) trend in the future and is highly relevant in automotive safety and urban travel planning.	The overall share of automotive boards in total revenue increased to 63% in 2022. In particular, the share of boards for new energy vehicles has also reached 20% of total revenue and will continue to increase. Technically, it covers high-density linking boards, high-frequency radar boards, thick copper boards, and bendable boards, etc.
13 CLIMAR CONTRACTOR	Adoption of emergency measures to cope with climate change and its impacts	With 2020 as the baseline, both the annual electricity conservation rate and greenhouse gas emissions of Dynamic are newly set with a goal above 4% and energy conservation action plans are prepared accordingly to proactively enforce energy conservation improvement plans, such as process improvement, equipment elimination, and electricity-saving plan, etc.	 Set climate scenarios and risk impact scope assessment according to the TCFD framework. ESG information is compiled in accordance with SASB standards. The Kunshan Plant revised the base year to 2020 to comply with the Chinese government's policy and targeted an annual reduction of 4% in electricity consumption per unit of revenue and greenhouse gas emissions per unit of revenue; in 2022, the Kunshan Plant reduced its electricity and energy consumption by 23.23% from the base year, and reduced its greenhouse gas emission intensity by 34.8% from the base year, both of which achieved the target of 4% reduction per year from the base year. The reduction was mainly achieved through the consolidation of plant facilities and efficiency gains. In accordance with the policy of the Chinese government, the base year of the Huangshi Plant has also been revised as 2020, and the goal of reducing electricity consumption per unit of revenue and greenhouse gas emissions per unit of revenue by 4%; compared with the base year is cloued by 10.7%, achieving reduction target; through the rectification of public facilities, new solar power generation facilities and the purchase of green electricity, etc., greenhouse gas emissions were reduced by 22.94% compared with the base year, and the reduction target is also achieved.
16 ANG STRONG INSTRUCTION	Promotion of a peaceful and inclusive society to consolidate sustainable development; availability of judicial access for everyone; creation of an effective, accountable, and inclusive system at all levels.	 Dynamic has a "That's not Right Mailbox" in place for its employees to express opinions about any managerial deficiency, administrative process, and protection of individual rights, among others. Dynamic has a "CEO mailbox" in place for its employees, business partners, third parties, and customers to file written complaints or reflect upon any corruption, bribery, and unethical behavior inside and outside the Company. Dynamic sets a hotline for its partners as one of the multiple convenient electronic ways to make their complaints heard. 	 The total number of complaints in 2022 was 8. Compared to 14 in 2021, this is a decrease of 42%, indicating that most of the problems have been ameliorated. No whistleblowing email was received in the CEO inbox in 2022. No report was received by the dedicated hotline in 2022.
	Assurance of non-classified, fair, and high-quality education and promotion of life-long learning	 Continue to perfect and consolidate the educational training system for its employees. Establish an iLearning (knowledge and learning) Committee as the unit to take charge of advanced educational training. Besides keeping track of professional knowledge and technical information of customers and in the industry, it is also responsible for defining the internal knowledge management system. Promote higher educational level for adult colleagues throughout the Huangshi Plant. 	 In 2022, the average hours of education and training for the Taoyuan Operation Center, Kunshan Plant, and Huangshi Plant reached 31.4, 27.8, and 21.2 hours, respectively. Due to Covid-19, courses were provided through video-conferencing wherever possible and tested were performed upon completion of training to confirm the training efficacy. The yield rate of the two plants has increased, quality costs have decreased, and employees' income has increased, thus creating a stable working environment. In 2022, 46% of the Huangshi Plant's employees had a college degree or above, and 15% of had a bachelor's degree or above. The overall qualification level of the Company's employees is relatively high compared to its regional peer companies.
8 BECENTWORK AND ECONOMIC GOURTH	Promotion of inclusive and sustainable economic growth to realize comprehensive and productive employment and make everyone enjoy a good job	 Built the Huangshi Plant to satisfy customer demand and offer more jobs. The Huangshi Plant in a local industrial park creates a cluster effect to support the upstream and downstream of the electronics industry, improve the local employment rate, and enhance infrastructure in the surroundings. 	 At the end of 2022, the production capacity of the Huangshi Plant No.1 increased to 1.8 million square feet, including 200 thousand square feet of high-density Interconnect (HDI) production capacity. In addition, the first phase of the Huangshi Plant No. 2 started mass production in August 2022, with a total production capacity of 600 thousand square feet, including 150 thousand square feet of HDI production capacity, which is a good opportunity for Dynamic to provide a stable employment environment to its staff and to sustain the growth in revenues and profits. The ratio of raw materials sourced locally at the Huangshi Plant reached 99%, and the ratio of local staff employed in Hubei Province was 60%.
	Build resilient infrastructures, promote inclusive and sustainable industries, and expedite innovation	Dynamic plans beyond conventional industrial competition and has the automatic, smart, and information-based innovative generation in mind to secure the competitive advantages of itself and all its partners whiling welcoming Industry 4.0.	 The Huangshi Plant is planned with an emphasis over automatic, smart, and Internet-based applications while at the same time fulfilling energy conservation, emission reduction, water and electricity saving, environmental protection, and industrial safety requirements. It is a modern plant that is economic, environmental, and features the latest technology. The construction of Huangshi Plant No. 2 will emphasize reducing the impact on climate change, as well as the adjustment and resilience to climate change.
17 PARTNERSHIPS FOR THE GOALS	Reinforce the implementation of sustainable development and activate global partnership in sustainable development	Dynamic introduces integrated thinking, combines corporate operation and sustainable management, and emphasizes interaction and co-prosperity with stakeholders, including enhanced global partnerships. The goal is to serve customers with highly efficient quality and create long-term supply chain partnerships.	 Dynamic's Sustainability Report also scored an AA, the highest among the first-time rated companies in the Cathay 2022 ESG Rating. Dynamic has partnered with more than 1,000 suppliers worldwide to promote corporate social responsibility.

TCFD Climate Change Risk Identification	Dynamic's Value	Sustainable Development Goals	Environment Aspect Performance Highlights	Society Aspect Performance Highlights	Governance Aspect Performance Highlights	Comparison Table of indicators of Sustainability Accounting Standards Board (SASB)	Appendix	
---	--------------------	-------------------------------------	---	---	--	--	----------	--

Са

Cha

Dynamic conducted an indicator comparison based on the Task Force on Climate-Related Financial Disclosures (TCFD) to identify the risks and opportunities associated with climate change. In 2020, Dynamic's identified and ranked the climate-related risks through internal discussions among all departments at headquarters and the subsidiaries to inventory the climate change risk issues. In 2022, nine major climate risk issues were identified based on the identification results of 2020, and a matrix of climate risk materiality was drawn up. The potential financial impacts as well as the related risk management approaches and countermeasures brought by climate change were also revealed, to refine Dynamic's governance of climate change.

Frequency of risks

Project	Implementation of the 2022 Target
Supply of raw materials	Disrupted supply of raw materials for zero days as a result of climate change Huangshi Plant The average annual utilization rate of raw materials reached 80% The raw material disposal rate has been reduced, and the average disposal rate is 4.32% Kunshan Plant Three alternatives and evaluations on three solutions (alkaline, acid, etchant), have been completed The average annual utilization rate for aw materials reached 80% The raw material disposal rate has been reduced, and the average disposal rate is 11.22%
Laws and regulations governing the environment	Huangshi Plant O Environmental pollution incidents The fulfilment rate of pollutants in meeting discharge criteria was 100% and that meeting stricter discharge criteria by 50% was 94.36% Performance of waste reduction: In-plant electrolytic recovery system for copper-containing wastewater (reducing the amount of high-concentration heavy metal wastewater treatment in wastewater treatment plants and producing valuable metals for recovery) 5,680m ³ of micro-etching fluid was reduced, and 829 tonnes of copper were produced. 80,162m ³ of etching fluid was reduced, and 1089 tonnes of copper were produced. 802m ³ of waste add liquid was reduced, and 1080 tonnes of copper were produced. 802m ³ of waste add liquid was reduced, and 94.8 tonnes of copper were produced. 802m ³ of waste add liquid was reduced, and 94.8 tonnes of copper were produced. 802m ³ of words and toput by 70%~80%. Film slag drying equipment: 373 tonnes of film slag waste was reduced. 813dage drying equipment: 450 tonnes of film slag waste was reduced. 814dage drying equipment: 450 tonnes of condensate and rainwater totaling 104,700 tonnes/year Kunshan Plant • The availability of environmental facilities has been improved, affecting the production of single unit for no more than 0.5 days per month • Cooperate 100% with the government in the monitoring and disclosure of each emission to have 0 environmental pollution incidents
ap control and carbon credit, energy trade-related	Purchase raw materials and regular materials that are 100% compliant with environmental protection requirements; prioritize the purchase of appliances of Grade 1 energy efficiency that are available on the market; Grade 1 energy efficiency of newly purchased appliances greater than 60% Huangshi Plant We have purchased 854 tonnes of carbon trading credits in 2022, December • Bring down greenhouse gas emissions per unit of the product by 17.3% from 2020 Kunshan Plant • For equipment replacement needs, we give 100% priority to energy-saving equipment • In 2022, Jlangsu Province, China, had not yet opened up carbon credit trading
Renewable energy-related	Huangshi Plant Purchased 10,000 MWh of green power, offsetting 7,164 tons of greenhouse gases Newly built photovoltaic power generation project, with a power generation of about 110,000 kwh in 2022 Replaced the original aeration Roots blower with an air suspension blower in the wastewater treatment plant, which saves about 300,000 kwh of power annually Kunshan Plant Not implemented due to the high cost of replacing lighting in the factory area and electricity with photovoltaics in living areas
Transformation of customer demand	Huangshi Plant • Fuffiled customer requirements 100% • UL2799 (zero Waste to Landfill) has been certified Kunshan Plant • Fuffiled customer requirements 100 % • ISO 50001 energy management system has been approved
Unstable energy supply	Huangshi Plant • New natural gas pipelines have been installed to the north of the plant to ensure a stable supply of natural gas to the plant Kunshan Plant • The capacity has been reduced to 400,000 feet and excess orders were transferred to the Huangshi Plant • We continue to promote energy diversification. In 2022, 5 sets of electric heating equipment have been replaced by steam heating • Based on the capacity of the Kunshan Plant in 2022, the current equipment is adequate. Therefore, 15,000 KW/H energy storage equipment has not been introduced • The long-walability of the generating units has been maintained, and additional backup capacity (650 kWh) has been put into operation • The plant area is subdivided. The boliers of Plant 1 are closed, Plant 2 can only use natural gas
anges in market demand/new innovative technolo- gies in industries	 Prioritize 100% raw materials and regular materials with fewer carbon emission per unit product compared to their equivalents In 2022, four pulse plating VCP wires were introduced in the Huangshi Plant, and the copper thickness uniformity can reach 0.2 mil or less. Regarding black hole/shadow process for high frequency board applications (non-mainstream technology applications), only sample risk is taken.
Intensifying extreme weather events	Disrupted supply of raw materials for zero days as a result of extreme weather events Huangshi Plant Incidence of major risks 0% Failure of related facilities 0% Control over response cost 0% Kunshan Plant Municipal pipeline network is connected to the plant. There is no need to increase the number of outfalls, and the stormwater system is not affected We have been keeping records of abnormal low temperatures and configure the drainage slope to minimize chances of water being built up and frozen in the pipes We have stengthened the frost protection windshield of the plants and retrofitted the air ducts with low-temperature resistant sprinklers

dynamic

Sustainability

Board (SASB)

Energy

- Maintain the operation of the ISO 50001 Energy Management System to enhance energy efficiency and demonstrate improved performance.
- ▶ In 2022, the Huangshi Plant purchased 10 million kWh of green electricity (accounting for 5.7% of the total power consumption of the plant). In 2023. we will expand the purchase of green power to 40 million kWh (accounting for 20% of the total power consumption of the plant).
- The Huangshi Plant constructed the first phase of a photovoltaic power generation project with an annual generating capacity of approximately 200,000 kWh in 2022, and will invest RMB30 million to complete the project with a total annual generating capacity of 6.5 million kWh in three years.
- In 2023, an online energy monitoring system will be introduced to monitor and display energy consumption data in real time. This not only improves the accuracy of product carbon footprint inventory, but also provides an important basis for energy improvement.

Performance of Kunshan Plant

-21.6%

The energy consumption intensity per unit of revenue in 2022 decreased by 21.6% compared with the baseline of 2020

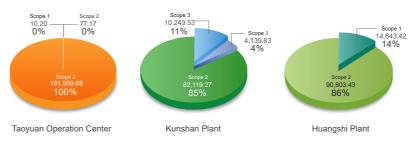

Performance of Huangshi Plant

The energy consumption intensity per unit of revenue in 2022 decreased by 15.4% compared with the baseline of 2020

Greenhouse Gas Emissions

GHG inventories have been completed in three operating sites, namely Taiwan, Kunshan and Huangshi in 2022. The status and the results of the inventories are summarized below:

The air-conditioning of the Taoyuan Operation Center was replaced by split inverter air-conditioners; the Kunshan Plant has improved energy efficiency and reduced greenhouse gas emissions through the consolidation of air pollution prevention facilities, such as CTO, RCO, and waste scrubbers, as well as modification of the operation control program of vacuum pumps for heat presses. The Huangshi Plant integrated the company car scheduling, replaced the inverter power equipment to reduce energy consumption while minimizing greenhouse gas emissions.

Performance of Taoyuan Operation Center

In 2022, compared to the baseline in 2020, the greenhouse gas emission intensity was reduced by 35.0%

Performance of Kunshan Plant

-34.8%

In 2022, compared to the baseline in 2020, the greenhouse gas emission intensity was reduced by 34.8%.

Performance of Huangshi Plant

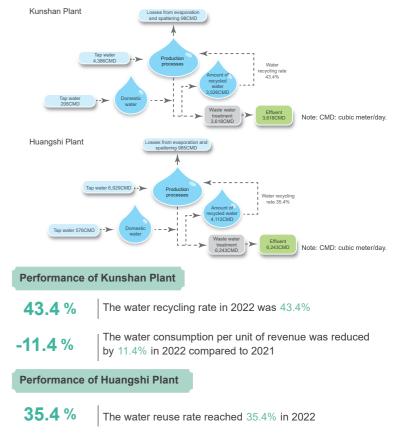

In 2022, compared to the baseline in 2020, the greenhouse gas emission intensity was reduced by 17.3%

Management of Water Resources

Hiahliahts

- None of the plant compound are located in areas subject to frequent water shortages and droughts, and there has been no significant impact from water shortage since the establishment of the factory.
- Kunshan Plant was certified AWS Standard in August 2022.
- Huangshi Plant was awarded the honor of Water-saving Enterprise by the Department of Urban and Rural Development of Hubei Province in January 2022.

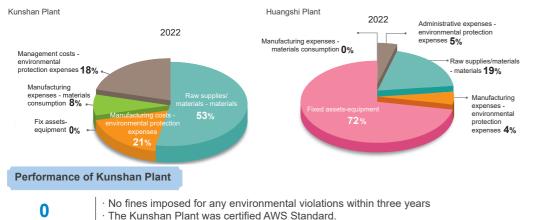

-11.5%

The water consumption per unit of revenue was reduced by 11.5% in 2022 compared to 2021

dynamic	
aynenne	

Environmental Investment

The pollution prevention and control facilities at the Kunshan Plant were originally designed with a large processing capacity. After the production capacity is reduced, the operation is relatively smooth. Therefore, there is no arrangement for new environmental protection-related facilities and the environmental protection expenditure is stable, mainly due to operation and maintenance, and pharmaceutical and material expenditures; in response to the increase in production capacity, the Huangshi Plant added an exhaust gas treatment system and a wastewater biochemical treatment plant to ensure compliance in 2022. Therefore, the expenditure on pollution prevention equipment accounted for a significantly larger proportion.

Performance of Huangshi Plant

0

No fines imposed for any environmental violations within three years

The Huangshi Plant was approved by the Huangshi Ecology and Environment Bureau for clean production and was honored as a National Green Factory by the Ministry of Industry and Information Technology.

Circular Economy

- We continue to promote the activation and reuse of metal-containing chemical wastes in our plants, and have obtained patents for a tin sludge recycling equipment for etching wastewater, a cylindrical cathode metal recycling equipment, and a combined palladiumcontaining wastewater recycling system for circuit boards.
- Promoting on-line recycling, the Huangshi Plant has fulfilled the recycling of gold resin, the recycling of activated palladium from plated wires, the recycling of electrolytic gold from aging liquid of gold plating tanks, the recycling of electrolytic etching waste liquid, the recycling and reuse of tin stripping liquid, and the recycling of waste circuit boards by crushing.

Green Products and Processes

Dynamic constantly reduces the use of resources and generation of hazardous substances in the design of products, the purchase of raw materials and regular materials, and during the production process to minimize impacts on the environment and to enhance the environmental friendliness of its products.

- Use of more environmentally friendly chemicals: In 2022, we introduced a chemical by utilizing the pulse plating chemical for through holes/blind hole production, it increased the through-hole filling capacity by 20% and reduce wastewater emissions by 5% during the treatment.
- Reduction and control of halogen content in halogen-free materials: In 2022, IQC monitored the halogen content of materials imported from suppliers for inspection. Total: 781 batches, achievement rate: 100%.
- Green product management system: Dynamic's green product management system is recognized by international organizations, our country and customers.

Waste Reduction

The Kunshan Plant has been promoting zero cross-border treatment, zero non-compliance in storage facilities, and continues to maintain the effective operation as per ISO 14001; the waste intensity per million RMB revenue in 2022 was 33% lower than that in 2021, and the reuse rate of business waste in the past five years has exceeded 96%.

The Huangshi Plant began to promote UL2799 certification in 2022 to achieve the goal of zero waste landfill.

Performance of Kunshan Plant

- **96.07%** The waste recycling rate in 2022 was 96.07%, and the industrial waste reuse rate in the past five years has exceeded 96%
- -28.2% The waste output intensity per million RMB revenue in 2022 was 28.2% lower than that in 2021

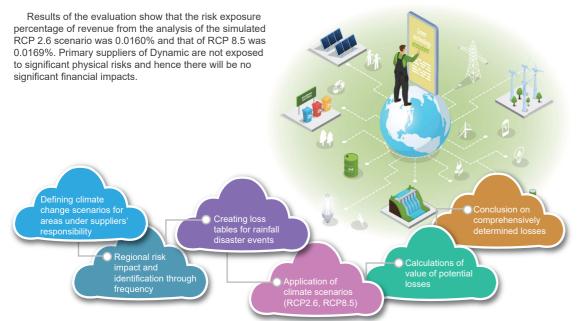

Performance of Huangshi Plant

- **96.50%** |
- The waste recycling rate in 2022 was 96.50%, and the industrial waste reuse rate in the past five years has exceeded 96%
- -13.7% The waste output intensity per million RMB revenue in 2022 was 13.7% lower than that in 2021
- 7

Appendix

Dynamic's Value dynamic

Dynamic conducted climate risk exposure inventories for the top three suppliers and assessed rainfall hazards in key suppliers' locations. According to the "Representative Concentration Pathways (RCPs)" in the Fifth Evaluation Report of the Intergovernmental Panel on Climate Change (IPCC) of the United Nations, the difference between the Radiative Forcing in 2100 and 1750 is used by Dynamic as indicators. Both RCP 2.6 and RCP 8.5 scenarios were used, and Climate Analytics' RCP 2.6 and RCP 8.5 scenario data are referenced.

Board (SASB)

Appendix

The overall greenhouse gas emissions of Dynamic throughout 2020 came to 217,322.5717 tonnes (only Scopes 1 and 2). With 2020 as the baseline, the annual carbon reduction ratio is forecast according to Dynamic's carbon reduction goal of 4% linear reduction a year and the five criteria of carbon prices, namely: the "EPA-recommended rate", "EU-estimated carbon tax rate", "IEA-estimated rate", Greenpeace-recommended rate", and "Estimated carbon price of the China Carbon Forum" and is calculated according to the current actual carbon credit trade ratio while Dynamic is evaluated for its extent of risk exposure under different scenarios in the future and up to 2050.

Results of the evaluation show that under each of the five estimated rates by 2050, financial impacts are the most significant applying the EU carbon tax and the Greenpeace-estimated rate and the minimal with the EPA-recommended rate. Although the results of the analysis are not harmful to Dynamic's operations, Dynamic is highly concerned about carbon related issues. In addition to actively introducing renewable energy equipment, Dynamic also promotes upstream carbon emission verification, and gives 100% priority to purchasing raw materials with low carbon emission per unit of product, to reduce the carbon emission of each stage in product life cycle, in the hope of giving customers environmentally friendly products with low carbon emission.

Ir	iferred year	2030	2040	2050	
Carbon Emission Scenario	Carbon Charge Scenario	2030	2040	2030	
	Recommended rate by the Environmental Protection Administration	\$2,868,658	\$1,051,841	\$595,464	
	Estimated rate of EU carbon tax	\$28,893,253	\$21,463,560	\$13,758,692	
Linear reduction of 4% a year as the carbon reduction goal of	Recommended rate by Greenpeace	\$33,020,861	\$17,403,522	\$13,758,692	
Dynamic	Estimated rate by the International Energy Agency (IEA)	\$36,138,570	\$17,035,885	\$12,046,190	
	Estimated carbon price of the China Carbon Forum	\$15,744,929	\$7,032,929	\$4,712,192

Highlights

Human Rights Policy

To fulfill our corporate social responsibility and to protect the basic human rights of all employees and stakeholders, Dynamic established its human rights policies in accordance with the principles outlined in international human rights treaties, such as the "Universal Declaration of Human Rights", "the United Nations Global Compact", "the OECD Guidelines for Multinational Enterprises", "International Labour Organization", "the UN Human Rights Norms for Business". Also, Dynamic complies with the labor laws and regulations of the countries in which the company operates. In accordance with the Regulatory Compliance Management Program and the Responsible Business Alliance (RBA) Code of Conduct, the Company has established Dynamic's policies and procedures for protecting human rights and is committed to upholding the human rights of workers and respecting them. These topics cover the following: freedom choice of occupation, young workers, working hours, wages and benefits, humane treatment, non-discrimination, and freedom of association.

The full text of Dynamic's human rights policy can be found by scanning the QR code on the right or by visiting the Company's website: https://www.dynaholding. com/file/8.%E4%BA%BA%E6%AC%8A%E6%94%BF%E7%AD %96.PDF

Talent Attraction and Retention

Dynamic multifaceted benefits system enhances employee motivation and willingness to stay on the job. The following countermeasures is provided:

- Through rigorous recruitment and talent selection, we can minimize the hiring of ineffective employees and improve the quality of our human resources.
- II. We care for our employees, improve the working environment, improve the company's welfare measures, and strengthen employee cohesiveness.
- III. We enhance employee training programs and reward personnel to propose for improvement, thus strengthening the company's competitiveness.
- IV. Transparent policies and management make employees understand the direction of corporate operation and cultivate their recognition for the Company.

Benefit measures:

Project	Description
Daily welfare measure	Complimentary meals and coffee and exquisite tea rooms Complimentary uniform and free parking lot for employees' motorcycles
Health care measure	Employee group insurance (cancer insurance and accident insurance) Regular health checkups and health education programs for employees Setting up a medical grade blood pressure monitor, AED (automated external defibrillator)
Recreational measure	Subsidies for various club activities Trips, staff lunch parties, group recreation activities
Incentive bonus measure	Year-end bonus, three Chinese festival grants paying, performance bonus and bonus system Announcing promotions and recognition of meritorious employees
Education aid measure	On-the-job training for staff Employee training subsidies, company-appointed foreign language teachers A library is available for staff to borrow books free of charge
Welfare assistance measure	Birthday gift, wedding and funeral subsidy, annual gift box, maternity subsidy, hospitalization subsidy, etc.

Note 1: The definition of others is determined by the employees themselves.

Note 2: Job type* direct employees are those engaged in production-related operations; and indirect employees are the other employees.

Note 3: The plants' outsourced workers include non-employee security, cleaning, and catering workers. The number of these workers is 175, and there is no significant fluctuation in 2022 compared to 2021.

Note 4: Employees with no guaranteed working hours.

Maternity Protection Program

2022 Kunshan/Huangshi Plant Maternity Protection Program Unpaid childcare leave has not been institutionalized in Mainland China so far. As such, the following maternity protection program is still adopted at the Kunshan and the Huangshi Plant:

- The number of people who are pregnant is tallied monthly and those who have been pregnant for seven months and longer are followed. They may not work night shifts or overtime. Meanwhile, their employer is reminded of adequately transferring them to other posts than engaging them in strenuous physical tasks.
- The mother is entitled to 128 days of maternity leave while the father has 15 days of paternity leave.
- Breastfeeding mothers are entitled to an hour of paid breastfeeding leave a day up to the one-year-old birthday of the child.

Communication Platform

Corporate internal publication "Dynamic"

Starting from 2014, "Dynamic" has been comprehensively reporting and reviewing the group's internal and external activities and achievements every year to provide the most faithful record of Dynamic's growth history, thus realizing the colorful life of the employees in Dynamic.

Complaint-filing Mechanism

Dynamic has established the "Regulations Governing the Management of the Unreasonable Suggestions Box" in 2013. Employees may submit their opinions in writing directly to the "Unreasonable Opinion Box".

- The Taoyuan Operation Center received no "That's Not Right" complaints throughout 2022
- Four complaints about wrong phenomena were received in 2022 at the Kunshan Plant, a decrease of 20% from 2021.
- In 2022, the Huangshi Plant received 4 "That's Not Right" complaints, representing a 56% decrease from 2021.

Occupational Health and Safety

With regard to labor safety, Dynamic has always been committed to compliance of laws and regulations, exercising due diligence, and providing employees with a healthy, safe, and clean working environment as the sole objective to fulfill the occupational safety policy. The plants operate smoothly through health management, safety management, and systematized systems on the premise of ensuring the health of workers, the protection of corporate property, and there is no threat to employees' lives.

Hazard identification, risk assessment, and accident investigation

Dynamic has established a risk assessment team responsible for workplace risk and opportunity assessment. Through continuous safety and health hazard identification, risk and opportunity assessment, appropriate preventive measures are taken; necessary control methods are implemented, and hazards are eliminated so that risks are controlled at an acceptable level. Also, regular internal and external audits are conducted to ensure that the quality of process execution is maintained, thus enhancing the performance of occupational safety and health.

The Huangshi Plant was designated a Healthy Enterprise in Hubei Province in 2022

Achievement of Industrial Safety Education and Training

Occupational Health Service

At the beginning of 2020, with the outbreak of COVID-19, many companies in Wuhan and Hubei Province, China were forced to shut down. On January 2, Dynamic established "epidemic prevention and response teams" and established epidemic control SOP. The access to the production line is strictly controlled according to the SOP. For the year ended December 31, 2022, there were no work stoppages in the Company due to personnel infected with the coronavirus.

Social Care

Dynamic's social care is driven by "responsibility" from the "heart", which includes education, charity, sports, academics, culture, and other aspects. Grasping the principle of "from close to distant" and "from near to far", our social care is continuously promoted. The "ESG Committee" is responsible for planning and execution, and it regularly reports to the Board of Directors. In 2022, the total purchase from public welfare organizations was TWD 1,657,689 and the total expenditure was TWD 329,299+CNY 37,830.

Product Quality

Automotive boards are the mainstream product of the Company and the customers often have the highest quality requirements. Therefore, the quality requirements for automotive products are to be followed in the formation of a product quality awareness culture to constantly reduce scraps and improve quality to the extent that is satisfying for customers and to lay the groundwork for the sustainability and survival of Dynamic.

To achieve external DPPM goals.

Quality Assurance Management System Quality Assurance Management Certificate

No defective products must be produced	 We prevent defective products by monitoring variations and making immediate adjustments through statistics and process control.
No defective products must be accepted	 We prevent defective products coming out through our staff's awareness on quality management.
No defective products must be released	 By 100% electrical testing and visual inspection, we prevent releases of defective products.

Kunshan Plant:

Customer Service

Customer Data Confidentiality

In 2022, Dynamic passed all customer audits on product and data security and confidentiality. In addition, there were no complaints regarding violations of customer privacy or loss of customer data.

Dynamic has always attached great importance to the management, storage, and confidentiality of customer data. It is Dynamic's established policy and commitment to "protect customer privacy and prevent customer data leakage or loss". There is a complete and systematic process for customer information handling, and a dedicated unit responsible for receiving, managing, and storing customer information, and all relevant personnel have signed a confidentiality agreement.

- Anyone unrelated wants to retrieve the data, prior application and electronic sign-off for approval are required. In addition, reproduction of the data is not allowed.
- · IT also builds the data encryption system. The person in charge of the data encrypts the data according to the confidentiality class for safety purpose.
- Strengthen the governance mechanism for network security, such as blocking network hard drives, instant messaging software, removable storage media, network mailboxes, etc.
- · Strict control over the use of mobile phones and mobile networks

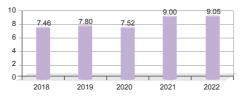

Customer Satisfaction Survey

The customer satisfaction survey results in 2022 showed a score of 9.05, which is unchanged from 2021. In the future, the company will move towards higher goals.

Response to Customer Cases

Plant is 100%

The number of customer services provided and the processing timeliness are tallied on a monthly basis to facilitate reflections. The on-time completion rate of customer service in Kunshan Plant is 100%. The on-time completion rate of customer service in the Huangshi

Sustainable Supply Chain

Supply

Chain

Evaluation

Through localized collaboration and to create a win-win situation, Dynamic is working together to bring down cost, shorten lead times, reduce supply chain risks, and improve competitive advantages. Local procurement, moreover, is also an important indicator of corporate social responsibilities and a sustainable development goal set by the United Nations in terms of supporting local economic developments, creating jobs, paying taxes, and attracting more funds. In 2022, the local procurement amounts of the Kunshan and Huangshi plants accounted for 98.83% and 98.53%, respectively.

When selecting suppliers or signing a contract with a supplier, Dynamic evaluates how corporate social responsibilities are fulfilled in three domains, namely, economy, environment, and society. The current control bottom line is that no significant actual or potential negative impacts are allowed; otherwise, the supplier must promise that corrections will be made by the given deadline. Dynamic will continue tracking progress up to completion of the corrections. If the supplier cannot comply, no collaboration will take place. Meanwhile, primary suppliers of raw materials and regular materials are asked to promise and undertake that they will:

- 1. Follow Dynamic's Integrity Policy and Conflict Minerals Policy.
- 2. Comply with the requirements of the RBA.
- 3. Be certified for their ISO 9001 Quality Management System.
- 4. Comply with ISO 14001 Environmental Management System and ISO 45001 Occupational Safety and Health Management System.
- 5. Meet the requirements of international laws and regulations on absence of hazardous substances, such as RoHS, REACH, and Dynamic Green Product Guidelines.
- 6. Formulate corporate social responsibility policies, integrity policies, and energy, environment, and safety and health policies, and promote corresponding management systems.

Each month, Dynamic scores suppliers on the performance of the month, including quality, unit price, delivery time, excess freight, service, etc., and provides improvement guidance for suppliers with abnormal performance.

Conflict Mineral Policy

Supplier

Counselina

Dynamic established the "Conflict Minerals Policy" and Commitment in 2013. Dynamic not only has its own proper policies, guidelines and due diligence procedures, but also requires its business partners to comply with this policy and enforce it by refraining from using or supplying inappropriately sourced metals in order to comply with international trends and customer requirements. Dynamic periodically updates its conflict mineral report template to be reviewed by its customers. The "Conflict Minerals" policy of Dynamic is available on the official website of the Company for public review: https://www.dynamicpcb.com/.

In 2022, in order to enhance the resilience of the supply chain to the risk of climate change, an energy consumption survey was done on 28 manufacturers whose purchases in the previous year reached a value of RMB 6 million. The findings are summarized as follows: 28 companies have set energy consumption targets that are lower than or equal to the national benchmark, and have been awarded the titles of green factories, green products, high-tech enterprises, and ISO 45001/ISO 14064 certifications. Measures taken in response to the national energy dual control include the purchase of green power, photovoltaic system, inverter energy-saving retrofits and air-conditioning temperature control.

Dynamic's Value

Board (SASB)

Appendix

Diverse composition of the Board of Directors

dynamic

In 2021, eight of Dynamic's directors have abundant business administration and academic experience, including four independent directors, and one of the four independent directors is a woman. Dynamic hopes to have a more specialized, independent, and diversified Board of Directors to lead the Group towards sustainable corporate developments.

Linkage between Salaries of Board Members and Performance in Sustainability

The results of the annual performance evaluation of the board of directors will be used as a reference for the selection and nomination of Directors and members of the functional committees. As far as the linkage between Board member performance evaluation and compensation and remuneration is concerned, the remuneration for Board members and the salaries of senior supervisors (CEO, President, Vice-President) at Dynamic are determined according to the compensation and remuneration policy, system, criteria, and structure advised by the Remuneration Committee and relate to the fulfillment of annual and long-term performance goals (including economic. environmental, and social). Remuneration for Board members of the Company is based on the requirements in 30 of the articles of incorporation. If the Company makes profits for the year, the Board of Directors can decide to allocate Board member remuneration no higher than 3% of the profits. As for how the remuneration is defined. the Company's "Director and manager compensation and remuneration policy" is followed. Besides the overall operational performance of the Company and the operational risk and developmental trends for the industry in the future, personal performance fulfillment and contribution to the Company's performance are referred to as well so that reasonable rewards are given. Performance evaluations and the adequacy of compensation and remuneration are reviewed by the Remuneration Committee and the Board of Directors and the remuneration system is adequately reflected upon according to the actual operational condition and applicable laws and regulations at any time to strike a balance between sustainable corporate operation and risk control.

Chairperson of the Highest Governance Body

Sustainable

Development

Goals

Since August 25, 2022, when the Company became an investment holding company, the Chairperson of the Board of Directors has retired as the Chief Executive Officer and no longer serves in a concurrent role in senior management. There are two Directors who also act as managers due to business development and operational needs.

Collective Wisdom of Highest Governance Body

All new and existing Directors in 2022 have completed a 6-hour refresher course, which includes: Enhancement of Directors' Functions and Implementation of Sustainable Corporate Governance, How Board of Directors Monitor ESG Risks to Build Sustainable Competitiveness for Enterprises, Core ESG Issues that Boards of Directors Should Care About, Blueprint for Sustainability, Trends of ESG Carbon Reduction and Strategies to Cope with Digital Transformation, and Low-Carbon Transformation Pathway Planning - Carbon Credits and Carbon Pricing. In addition, Board members' awareness and engagement on economic, environmental, and social issues is enhanced through quarterly ESG sustainability committee presentations at Board meetings and the management's project reports.

2022 Board of Directors Performance Review Outcome

In 2022, Dynamic conducted the internal performance evaluation of the Board of Directors, and the evaluation results are as follows: all aspects of performance are excellent. Primary suggestions and corrective actions of the Board of Directors and functional committees are as follows:

- I. Have the management report to the Board of Directors on information about the upstream, downstream, and the industry the Company is in and their changes at least on a quarterly basis and provide industry reports from time to time.
- II. Include assessments on the Company's existing or potential risks, the internal control system's implementation and how these risks are handled and tracked by the internal control system in the quarterly internal audit report of the Board of Directors.
- III. Arrange for an explanatory report on the operation and environment of the company.
- IV. Re-enforce communication with Directors on motions before Board meetings.
- V. Proactively seek consultation, advice and assistance as needed based on the member's expertise.

Risk Management

Through the Risk Management Committee in 2022, those responsible for strategy, operation, finance, hazard, and climate change continue to evaluate the impacts that the external economic, environmental, and societal changes have on the organization to accordingly identify opportunities and prepare countermeasures and action plans. After each report was compiled, it was submitted to the Chairperson for approval and supervision and then to the Audit Committee for review and feedback before it was presented to the Board of Directors. In 2022, the Risk Management Committee has assessed 9 risk issues, including: the risk of electric power, water resources and flooding for the construction of new plants in Thailand; the risk of the European energy crisis to the Company's business; the risk of unstable shipping schedules due to the global COVID-19 outbreak; the risk of the Russo-Ukrainian war, which resulted in the increase in the price of raw materials and the increase in the cost of transportation to the Company; the risk of the reduction of automobile production due to the war to the Dynamic's business; and the risk of the attack of the ransomware virus affecting the operation. The responsible units have all formulated corresponding measures, which are reviewed by the members of Audit Committee and reported to the Board of Directors with continuous follow-up.

Development of New Markets

Goals	Accomplishments in 2022	Goals in 2022	Goals in 2023	Goals in 2025 (Medium-term)	Goals in 2027 (Long-term)
Technology	Thin boards, thick boards, thick copper boards, and high-frequency and high- speed boards are all in mass production	Produce thin boards, thick boards, thick copper boards, and introduce high-frequency and high- speed materials	Produce thin boards, high-layer boards (16 or more), high-level HDI, and introduce low-loss materials	Produce ultra-thin boards and introduce ultra-low-loss materials	Produce high-speed signal- related products

"Developing new marks" gives the momentum for growth of an enterprise and is something that many stakeholders care about. Our action program for 2022 is listed below:

By collecting various information related to the upstream, midstream and downstream of the industry and the environment, and regulations, we assist our management in decision-making and formulation of research and development strategies, aiming at the product lines of new energy vehicles, advanced driver assistance systems, automated driving, network communications, and the server market.

We review our CRM (Customer Relation Management) and organize "Voices of Customers" from customer's sample production, approved progress, meeting minutes produced by sales staff, and results of audits on customer's factories. We report and propose improvement plans in our monthly business meetings to achieve continuous improvement and enhance customer satisfaction.

Friday Friday

We have set up a FAE (Field Application Engineer) department to fully communicate with our customers' design and marketing departments at the development stage and to fully cooperate with their design capabilities in order to differentiate the market by providing precise and suitable product quality at the right price and cost.

For international customers, active establishment of global service network points provide timely and effective after-sales services in terms of marketing, technology, and quality, amongst others, which increase control over customer demand, thus developing a steady relationship with our customers.

For emerging companies that are developing futuristic products, we proactively invest various resources to assist in their research and development work, increase the development of private label customers, and enhance our mastery of customers' specifications from the top down, so as to establish a basic cooperative relationship. Upon the maturity of the customer's product development and a certain degree of market scale, we will become their long-term cooperative partner.

Legal Compliance

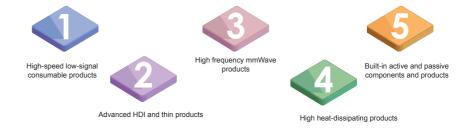

Mechanism	Implementation Methods							
	To fulfill compliance, Dynamic has established a three line of protection for compliance procedures, which are continuously being optimized and adjusted according to the goals.							
	First line of protection "Self-inspection"	Second line of protection "Compliance"	Third line of protection "Internal audit"					
	Departments responsible for the operations	Legal affairs, quality assurance, environmental safety, information departments	Audit department					
Regulatory compliance The Three Lines of Defense	The responsible department designates specialists to identify, update, promote, and implement regulations. The responsible personnel receive external courses and educational training every year to continuously strengthen their awareness of compliance and mastery of the development in their professional fields, and, further, to incorporate them into daily business activities.	The Legal Affairs Office is responsible for grasping the actual operational conditions, which covered key areas, such as environmental protection, labor, risk review, and equipment procurement and maintenance. Together with the Quality Assurance Department, Environmental Safety Department, Environmental Safety Department, and Information Technology Department, cross-functional teams can be organized in accordance with relevant international management system requirements to monitor and assist various management systems from time to time to ensure that risks and controls are effectively managed.	The audit office provides independent supervision and reports to the Audit Committee and the Board of Directors. For the internal control system, the Company follows the "Regulations Governing Establishment of Internal Control Systems by Public Companies" while evaluating the design and effective implementation of the internal control system hopefully to reasonably ensure fulfillment of internal control goals.					

Legal Compliance of the Dynamic Three Lines of Defense, each performs its own function to ensure the implementation of the legal compliance system. Under this rigid procedure and precise implementation, the Group in 2022 was not subject to any major fine (worth more than TWD 1 million) imposed for the violation of applicable laws and regulations in the supply and use of products and services, environmental or other issues or sanctions due to other liabilities.

R&D and Innovation

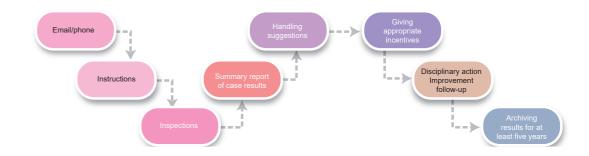

Goal	Accomplishment in 2022	Goals in 2022	Goals in 2023	Goals in 2025 (Medium-term)	Goals in 2027 (Long-term)
Number of R&D people	7.3%	At least 5% of all people	At least 5% of all people	At least 5% of all people	At least 5% of all people
Value invested in R&D	4.32%	At least 2% of all revenue	At least 2% of all revenue	At least 2% of all revenue	At least 2% of all revenue
Patents	15	18	22	20 and more	24 and more

Faced with the rapid changes brought about by the Internet, the quickly emerging innovative technologies, and innovative products that never stop making their debuts to gain market presence at a lower price, "research and innovation" is a particular key indicator of sustainable management. Our main R&D projects in 2022 were as follows:

Anti-corruption

To go with the anti-corruption policy, Dynamic on the one hand, has a relatively strict supervisory mechanism for departments and business activities that are at higher risk of non-integrity; on the other hand, promulgates the "Operating Procedure to Reward Whistleblowers". For the specific whistleblowing channel, reward system, the specific handling person, the processing procedure, and related confidentiality mechanisms, please visit the Company's website. Reporting channels: Chairperson mailbox (ceo@dynamicpcb.com); hotline (Tel. +886-980-051-059)

Indicator

dynamic	2022 Key Performance	Dynamic's Value	Sustainable Development Goals	Environment Aspect Performance Highlights	Society Aspect Performance Highlights	Governance Aspect Performance Highlights	Comparison Table of indicators of Sustainability Accounting Standards Board (SASB)	Appendix
---------	----------------------	--------------------	-------------------------------------	---	---	--	--	----------

The following shows the performance on key indicators over the past two years of the PCB business and the goals for the coming year and over the long term:

Key Indicator	Plant	2021 Performance	Goals in 2022	2022 Performance	Goal Achieved?	Description	Description of Countermeasures	Goals in 2023	Goals in 2025
Revenue growth rate	Group	24.8%	-3.5%	-2.9%	\odot	The demand was significantly reduced due to the unfavorable macro-environment.		*	*
EPS	Group	1.70	1.77	1.97	\odot	Since the product mix is developing towards higher technology, the after-tax net profit increased by 16.3% due to the expansion of automated and intelligent production capacity of the Huangshi Plant and the favorable exchange rate.		*	*
Ratio of automotive boards in revenue	Group	52%	57%	63%	\odot	The growth momentum of automotive boards was maintained.		63%	*
Operational performance growth rate**	Group	51%	5%	15%	÷	The product mix is moving towards higher technology, and the expansion of automated and intelligent production capacity at the Huangshi Plant is being led toward positive operating performance.		5%	Fulfill the expected growth rates through automation, smart processes and manufacturing, and increased sale per unit on average.
Customer satisfaction survey score	Group	9.00	9.00	9.05	\odot	We have a customer relationship management system and "Customers' Voices" are collected and reported to all relevant units in the monthly management meeting to raise their concerns and make improvements to enhance customer satisfaction.		9.00	9.00
Ratio of value of raw materials and regular materials purchased locally	Kunshan Plant	98%	95%	99%	\odot	The local procurement strategy of Dynamic not only helps bring down the transport cost, shorten lead-times, reduce the supply chain risk, but also supports local economic developments, creates jobs, and attracts devotion of more capital. It is an important indicator of the corporate social responsibilities of Dynamic and contributes to the fulfillment of the sustainable development goals set by the United Nations.		95%	95%
	Huangshi Plant	99%	95%	99%	\odot			95%	95%
Percentage of suppliers signing certificates on the absence of environmentally hazardous substances, compliance with the RBA code of conduct, integrity commitment, and non-use of conflict minerals	Kunshan Plant	100%	100%	100%	\odot	Green supply chain is an important part of Dynamic's sustainability, and we will continue to work together with our suppliers for a better and sustainable future.		100%	100%
	Huangshi Plant	100%	100%	100%	\odot			100%	100%
Annual electricity conservation rate (2020 as the baseline year, and electricity consumption intensity as an indicator)***	Kunshan Plant	-18.81%	-8%	-23.25%	\odot	We promote the ISO 50001 energy management system and consolidate idle equipment to achieve the goal of energy saving and carbon reduction.		-12%	-20%
	Huangshi Plant	-14.55%	-8%	-10.78%	\odot	We achieve our reduction targets through energy efficiency improvements in public facilities, monitoring of electricity consumption in production, construction of new solar power generation facilities and procurement of green electricity.		-12%	-20%
GHG emission increase/decrease rate (2020 as the baseline year and emission intensity as an indicator)***	Kunshan Plant	-29.59%	-8%	-34.81%	\odot	We achieved the reduction target mainly through the consolidation of idle public facilities and the improvement of energy efficiency of key production facilities.		-12%	-20%
	Huangshi Plant	-14.67%	-8%	-17.32%	\odot	We achieve our reduction targets through energy efficiency improvements in public facilities, monitoring of electricity consumption in production, construction of new solar power generation facilities and procurement of green electricity.		-12%	-20%
Annual water conservation rate (2015 as the baseline for the Kunshan Plant and 2018 as the baseline for the Huangshi Plant)	Kunshan Plant	-10.58%	-14%	-48.85%	\odot	The water consumption of the Kunshan Plant in 2022 was approximately 1.68 million tons, 48.85% lower than the base period of 2015, and the water consumption per unit of revenue was also 26.73% lower than the base period of 2015.		-16%	-20%
	Huangshi Plant	+90.18%	-8%	+153.78%		The growth in revenue was 300.35% of the base period, resulting in a corresponding increase in tap water usage. However, in terms of water consumption per unit of revenue, it was 36.61% lower than the base period.	A new reclaimed water recycling system will be planned for Huangshi Plant No. 2, which will reduce the use of tap water and RO water.	-10%	-14%
Percentage of water resource recycled for reuse	Kunshan Plant	20.80%	30%	43.4%	\odot	In 2022, water reuse at the Kunshan Plant was limited by the size of the water recycling facility. However, through efficiency management, the reuse rate was still increased by nearly 5% compared to the previous year.		30%	35%
	Huangshi Plant	35.84%	32%	35.4%	\odot	Targets are achieved through projects such as recycling of effluent, recycling of air-conditioning condensate, and collection and utilization of rainwater.		33%	35%
Safe production	Kunshan Plant	0	Zero major accidents	0	\odot	Supervisors in the field communicate to and set requirements for employees before each shift to improve their awareness of safety and to consolidate the use of personal protection equipment. Equipment and facilities as well as environmental conditions in the field are replaced or modified in a timely manner.		Zero major accidents	Zero major accidents
	Huangshi Plant	0	Zero major accidents	0	\odot	The President leads a team to conduct plant-wide inspections at least two times a year. External safety experts are hired monthly to conduct safety inspections, and feedback is promptly responded and addressed.		Zero major accidents	Zero major accidents
Average number of hours of educational training provided	Taoyuan Operation Center	18.8	21.0	31.4	\odot	In response to changes in the business environment, we cultivate supervisors with the ability to develop strategies for new markets and new industries, thus assisting the Company in grasping the opportunities of restructuring.		22.0	24.0
	Kunshan Plant	19.6	19.5	27.8	\odot	We have increased training on our quality system, so that staff can better master the quality management system, enhance the quality awareness and sensitive recognition of quality.		20.5	21.0
	Huangshi Plant	17.6	19.5	21.2	\odot	Through the experiential learning of the knowledge management system, we have improved the stability of product quality and organized activities to promote Total Productive Management (TPM).		20.5	21.0

*Please refer to the information available at the Market Observation Post System (MOPS) or the Annual Report provided during the Shareholders' Meeting.

**Operational performance = Total revenue/number of employees; growth rate = (Operational performance of the current year - Operational performance of the preceding year)/Operational performance of the preceding year.

*** Starting in 2022, the goal is revised as: 2020 as the baseline, the energy consumption density and greenhouse gas emission (by revenue) drops 4% a year and at least 20% by 2025.
